

DENNIS NDUTO

Computer Science Specialist | BSc Information Technology | AI Evaluation & Technical Writing

Nairobi, Kenya · dennisnduto418@gmail.com · Remote Contractor Available

PROFESSIONAL SUMMARY

BSc Information Technology professional from Murang'a University of Technology with a strong foundation in computer systems, databases, algorithms, system design, artificial intelligence concepts, data analysis and technical documentation. Skilled at reviewing technical content for accuracy, clarity, completeness and reasoning quality. Experienced in producing structured written feedback, identifying ambiguities or gaps in technical explanations, and translating complex computer science ideas into precise, accessible documentation. Well suited for remote AI data and evaluation work requiring subject-matter judgment, technical communication and careful quality review.

CORE SKILLS

- | | |
|---|---|
| > Technical writing and technical communication | > Editing and reviewing technical documents |
| > Algorithms, data structures and problem solving | > Distributed systems and networking fundamentals |
| > System design and software architecture | > Critical thinking and structured feedback |
| > Database design, SQL and data integrity | > Research write-ups and documentation review |
| > Artificial intelligence concepts and evaluation | > Collaborative research and guideline refinement |
| > Data analysis and evidence-based reasoning | > Python, Java, JavaScript and web systems |

EDUCATION

Murang'a University of Technology

Bachelor of Science in Information Technology | Murang'a, Kenya

Relevant coursework and academic focus: algorithms and data structures, database systems, software engineering, systems analysis and design, computer networks, web development, operating systems, information systems security, data analysis and artificial intelligence fundamentals.

RELEVANT EXPERIENCE

Computer Science Content Review & Technical Evaluation

Academic and project-based experience | Remote-ready

- > Analyzed computer science problems, proposed solutions and technical explanations for correctness, completeness and logical consistency.
- > Reviewed materials involving algorithms, databases, software systems, system workflows, artificial intelligence concepts and data-driven reasoning.
- > Identified errors, weak assumptions, ambiguities and missing edge cases that could reduce the quality of AI training or evaluation data.
- > Provided structured written rationales explaining why a response, solution or document was accurate, incomplete, unclear or technically unsound.

Technical Writing, Editing & Documentation

Murang'a University of Technology - Academic and independent project work

- > Authored and edited technical documentation for software, systems and IT-related coursework projects.
- > Prepared structured write-ups covering system requirements, design decisions, implementation logic, testing considerations and project results.
- > Converted complex technical ideas into clear explanations for technical and non-technical audiences while preserving accuracy and rigor.
- > Reviewed written materials for clarity, consistency, grammar, professional tone and alignment with project guidelines.

Software Systems, Databases & Data Analysis

Academic projects and applied practice

- > Designed database-driven systems using relational tables, relationships, queries, validation rules and reporting logic.
- > Applied system design thinking to define user workflows, data flows, access patterns and backend behavior.
- > Used analytical problem solving to debug application logic, improve data accuracy and document expected system behavior.
- > Worked with programming and web-system concepts using Python, Java, JavaScript, SQL and API-oriented design principles.

A I E V A L U A T I O N & R E S E A R C H S U P P O R T

AI Response Evaluation and Feedback

Project-based evaluation practice

- > Evaluated AI-generated technical responses for factual accuracy, reasoning depth, clarity, relevance and usefulness to the target task.
- > Assessed whether responses followed instructions, handled constraints, explained tradeoffs and avoided unsupported or misleading claims.
- > Reviewed visual and structured technical content such as system diagrams, workflows, data charts and problem statements.
- > Produced concise feedback designed to improve model accuracy, robustness and alignment with domain expectations.

S E L E C T E D T E C H N I C A L P R O J E C T S

Database Management System Project

- > Designed a database-backed information system with structured entities, relationships, queries and validation logic.
- > Documented the database design, user workflows, reporting requirements and data quality considerations.

Web-Based Information System

- > Built a web application using frontend, backend and database concepts, with emphasis on user workflows and reliable data handling.
- > Documented feature behavior, implementation logic, testing considerations and technical decisions.

AI and Technical Evaluation Practice

- > Reviewed technical prompts, model answers and structured explanations for correctness, ambiguity and completeness.
- > Applied computer science knowledge to evaluate outputs involving software, algorithms, databases, systems and data analysis.

R O L E F I T F O R M I C R O 1

The Computer Science Specialist role requires domain knowledge, careful analysis, technical writing, document review and high-quality feedback for AI training workflows. My BSc Information Technology background aligns closely with the role's required computer science foundation, while my experience reviewing technical content and writing structured evaluations matches the work of authoring, critiquing and improving AI training materials. I am detail-oriented, adaptable and comfortable completing asynchronous remote project work within clear guidelines.

A D D I T I O N A L I N F O R M A T I O N

- > Availability: Remote contractor work; able to complete asynchronous project-based assignments.
- > Work style: Detail-oriented, deadline-focused, collaborative and receptive to guideline-based feedback.
- > Communication: Strong English writing proficiency with clear, structured technical explanations.
- > References: Available on request.
